

Very little has changed in the pad filtration industry in its many years of existence...until now !

## American Tartaric Products introduces the **BECOPAD** from Begerow

This will revolutionize the filtration process as you know it. For the first time, technological innovation makes it possible to combine the strictest standards for microbiological safety with full retention of valuable flavor and color and hops bitterness in your final package – the best thing that could ever happen to your beer.

Purity in taste and appearance: The pure white **BECOPAD** depth filter sheet shows significantly less discoloration, and less bitterness units removed from your beer. Drip losses are reduced to a minimum, and filter backwashing and re-application become much easier, which saves time and costs. Due to multiple re-uses of the filter pads, your true filtration cost on a per barrel basis will be greatly reduced versus that of standard sheets.

**BECOPAD** not only stands for superior filtration and hygiene, it also enables sterile filtration without any mineral-containing constituents. It is composed of 100% cellulose material and no D.E.

The advantages of **BECOPAD** include:

- 100 % Mineral free, eliminating BSI sourced from filtration media
- Multiple re-uses of the pads, considerable cost reduction on a per barrel filtered basis
- Flushing volume reduced by 50 %
- Drip losses reduced by 90 %
- Extremely high LRV retention values
- Biodegradable
- Pads available in all sizes and grades
- Higher wet strength than conventional sheets
- No pad material sticking to the frames: cutting labor costs and improving throughput
